Quiet and Efficient

The Quiet Dryer uses a best-in-class, commercial grade blower; this is the same blower used in Zimmerman tower dryers without any loss in capacity or airflow, and with comparable electrical efficiency to FFI vane axial fan portable dryers. This patent pending feature, combined with the proven star-fire burner used on existing vane axial FFI portable dryers, provides an efficient delivery of airflow to the burner.

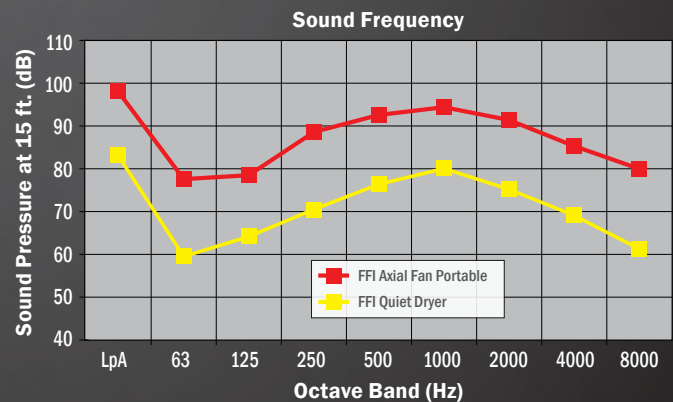

With a higher grain throughput than centrifugal fan portable dryers, the Quiet Dryer is a quieter, efficient solution to drying.

You Have to Hear it to Believe It

Noise is one of the most common occupational hazards. Exposure to high levels of noise may cause hearing loss, create physical and psychological stress, reduce productivity, interfere with communication, and contribute to accidents and injuries by making it difficult to hear warning signals.

The GSI Quiet Dryer is 50% quieter than vane axial portable dryers. Not only is this dryer quieter, but with a frequency centered in the 1,000 Hz range, it produces a more comfortable, less harsh tone.
